Amendments to the Specification:

Please replace paragraph [0027] with the following amended paragraph:

[0027] As an alternative to the use of driving grooves (10) to transmit rotary drive from the tool holder to the tool, as shown in FIGS. 6 and 7, it is also possible for the shank (2) of the tool to have a non-circular transverse cross-section, for example a hexagonal cross-section, so that rotary drive can be transmitted from a tool holder formed for example with a bore for receiving the tool having the same transverse cross-section as the tool.

Please add the following new paragraphs [0020A] and [0020B] immediately after paragraph [0020] and above the header for the DETAILED DESCRIPTION:

[0020A] Figure 6 shows a longitudinal cross-section through a tile cutting tool according to an alternative embodiment of the present invention; and

[0020B] Figure 7 shows an axial cross-section view VII-VII through the tool of FIG. 6.
